

Meeting notes april 7

Opening

- Start meeting 1800
- notes made by jaap

Organization

Martijn talks about organizational issues: The mailing list is organised by a google app system. Advisors should very much be kept in the loop on all group-wide information mails. People should also make arrangements with Jan Zagers concerning the lab. We really need to clean up better after ourselves than last year team or there will be repercussions.

Jori explains that he has build an integrated mail/internal wiki/document sharing/agenda system. He needs a few more days to finish it. Jaap remarks that organization/communication is going rather crappy. Many task are left undone while time is against us. Jaap delegated several tasks that have stacked up on him to other team members: Joyce will handle the DSM contact.

Olesha will refine contact information of companies and foundations. Jori will organise contacts of know members and contact. Kuba will builds landing site on public wiki before next meeting. Everyone should send photo's to Kuba so he can put them online. Olesha would like to recommend another member. She will send information to Kuba. He would like to be involved with the human practices part. But we have no idea what we want to do with that. He is welcome to join but we should think and talk about the Humanities part of IGEM and see if we come up with some idea's.

A discussion of the various plans

Kuba's plan

Kuba found some concrete genes that can implement his plan. The point is to show that a dual memory is possible. It will be induced by Nisin The application should be pictures on plates. Disintegrating micro-capsules might also be included in the system. Christof suggest reading a pancake article Which might offer some usefull information. Jori suggest using lighth sensors to activate it instead of the nisin microcapsules.

Jori's plan

Joris plan is to make a biocolorer with 2 or 3 different sensors. To produce a specific color. I is closely related to Kuba's plan. GFP is bleaching so it might give problems. Kuba thinks using pigments is difficult. The key is in ratio's there are many possible ways to have a computer to figure out relations how they should be programmed.

Joyce's Plan

Joyce wants to make a bio deodorant, that produces both antibiotics and masking smells (honey or some other nice thing) under certain conditions. She has found most of the required parts in the registry. Christof remarks that it seems like a biotechnology project. Joyce disagrees and want to expand it further and make a clearer presentation. We decide to make even groups and work on these two plans: Jori and Kuba's plan will be fused.

New todo list

- Jori: Patch Sharepoint distribution so we can use it **ASAP**
- Jori: Organization all current contact information **April 14th**
- Kuba: Make a landing site for the wiki **April 14th**
- Olesha: Make contact information for companies **April 21th**
- Jaap: Adapt Sponsoring letters **April 14th**
- Joyce: Correct jaaps letters **April 14th**
- Everyone: Send picture to kuba for site **ASAP**
- Jori: Make an availability doodle **April 21th**
- Joyce: Contact Roel Bovenberg for DSM sponsoring **April 14th**

Closing

Meeting ends 2030
